# **DETAILED ACTION**

### Examiner's Comments

1. This action is in response to applicant's amendment received 6/2/2006. Upon further discussion with applicant during a telephone interview (see attached summary), applicant has now amended claims 1, 4, and 5, cancelled claims 2 and 3 and added new claim 6. The pending claims are now 1 and 4-6.

2. Applicant's amendment has remedied all matters pertaining to indefiniteness and the rejections made under the second paragraph of 35 U.S.C. 112 are hereby withdrawn.

## Examiner's Amendment

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert Schneider at 312-845-3919 on 6/15/2006.

The application has been amended as follows:

The claims have been replaced by the following:

Claim 1. A stapler comprising a driver unit having a driver for punching out a staple toward sheets, said driver comprising a drive-out mechanism to drive out the staple when the driver is reciprocated, and the drive-out mechanism comprising a first driving shaft,

a clincher unit having a clincher base comprising a clincher to clinch leg portion of the staple passing through the sheets, the driver unit being vertically separated from the clincher unit, said clincher comprising a clincher mechanism for clinching the leg portions of the staple passing through the sheets, said clincher mechanism comprising a second driving shaft,

wherein the clincher base is disposed so as to vertically reciprocate, and the sheets are clamped between the clincher base and the driver unit when the clincher base is driven for reciprocation, Application/Control Number: 10/525,537

Art Unit: 3721

the stapler further comprising a first driving motor provided for the driver unit to operate the driver, said first driving motor being configured to make the first driving shaft perform one reciprocating movement of the driver when the first driving shaft is rotated by one turn,

a second driving motor provided for the clincher unit to reciprocate the clincher base and to operate the clincher, said second driving motor being configured to make the second driving shaft perform one reciprocating movement of the driver when the second driving shaft is rotated by one turn, a first detector for outputting a pulse every time when the first driving shaft turns by a given angle, a second detector for outputting a pulse every time when the second driving shaft turns by a given angle, and a controller for controlling the first and second driving motors based on the number of pulses outputted from the first and second detectors, respectively, wherein the second driving motor is driven to make the clincher base clamp the sheets between the driver unit, and then the second driving motor is stopped;

thereafter the first driving motor is driven to make the drive-out mechanism operate toward\_and drive out the staple through the sheets, and then the first driving motor is stopped;

thereafter the second driving motor is driven to make the clincher mechanism\_operate and clinch the leg portions of the staple having passed the sheets, the clincher base is returned, and then the second driving motor is stopped; and

after the clinching operation is terminated, the first driving motor is driven to return the driver to an initial position, and then the first driving motor is stopped.

Claims 2-3 have been cancelled.

Claim 4. The stapler set forth in claim 1, wherein said first detector is\_a first encoder for outputting a pulse every time when the first driving shaft turns by a given angle; and

said detector is\_a second encoder for outputting a pulse every time when the second driving shaft turns by a given angle.

Application/Control Number: 10/525,537 Page 4

Art Unit: 3721

Claim 5. The stapler set forth in claim 1, wherein the clincher unit is disposed above the driver unit, the clincher unit moves downwardly, and the sheets placed on an upper face of the driver unit are clamped between the clincher base and the driver unit.

Claim 6. The stapler set forth in claim 1, wherein said first detector is a first encoder for outputting a pulse every time when the first driving shaft turns by a given angle; and said second detector is a second encoder for outputting a pulse every time when the second driving shaft turns by a given angle.

#### Reasons For Allowance

4. The following is an examiner's statement of reasons for allowance. The prior art of record fails to anticipate or show in combination all the features of applicant's invention:

Specifically, applicant's amendments have combined the limitations of allowable subject matter as indicated in both the prior office action mailed 3/16/2006 as well as in a telephone interview with applicant's counsel on 6/12/2006.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### Conclusion

- 5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian Nash whose telephone number is 571-272-4465. The examiner can normally be reached on Monday Thursday from 8 a.m. to 6 p.m.
- 6. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,
  Rinaldi I. Rada can be reached at 571-272-4467. The official fax number for this Group is: 571-273-8300
